To Whom it May Concern

GRID-TIE SOLAR PHOTOVOLTAIC INSTALLATION

I recently had a solar photovoltaic grid-tie solution installed at my home in Summerstrand, Port Elizabeth by IET Technologies.

The system consists of 32 x 250W Photovoltaic panels that are mounted on my roof and feed into an 8kW SMA grid-tie inverter that is connected to my distribution board.

IET Technologies installed the system competently and efficiently and also supplied an electrical Certificate of Compliance.

I am happy with the output of my solar electricity system. The peak daily output so far has been in excess of 60kWh (or units) and at this time is more than covering my average daily usage.

I would not hesitate to recommend IET Technologies for any solar electricity or electrical backup projects that you may be considering.

Sincerely
